GIGHUB

AI-POWERED ESCROW MARKETPLACE DESIGNED TO BRIDGE THE TRUST GAP IN MALAYSIA'S GIG ECONOMY BY ACTING AS A SECURE INTERMEDIARY BETWEEN FREELANCERS AND SMES.

MICKEY MOUSE CLUBHOUSE

BACKGROUND

A Structural Shift with a Missing Bridge

01

A Structural Labor Shift

3M+ *(Malaysian Freelancers)*

The Financial Wall

72% *(Financially Excluded by Banks)*

02

03

The Market Hesitation

1.07M *(SMEs Too Scared to Hire)*

PROBLEMS

WHAT DO WE WANT TO SOLVE?

01 The Talent Trap: Unprotected & Unbankable

Working Endlessly

Payment Ghosting

Invisible To Bank

PROBLEMS

WHAT DO WE WANT TO SOLVE?

02 The SME Dilemma: High Risk, No Safety Net

Hunger For Talent

SME/Start-ups Owner

(Without HR)

PROBLEMS

WHAT DO WE WANT TO SOLVE?

03 The Core Deficit: No Neutral Infrastructure

Trust and Infrastructure Deficit

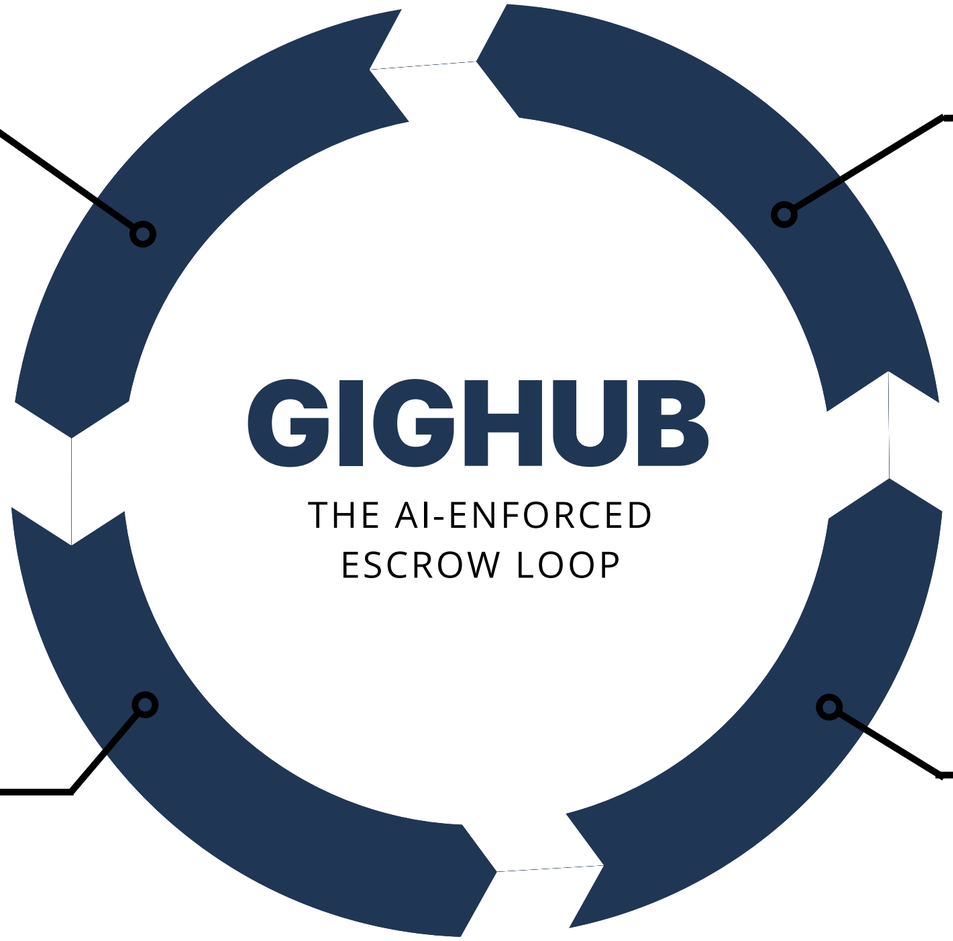
SOLUTION

AI Validation

GLM evaluates the project scope for absolute clarity before publish.

Smart AI Matchmaking

Two-way curation connects the validated brief to the perfect talent.



Financial Inclusion

Automated, bank-ready "Statement of Earnings" generated upon completion.

Guaranteed Escrow

Funds are securely locked before a task is completed.

CORE FEATURES

WHAT OUR PRODUCT DOES?

1 GLM Brief Validation:

Before posting job, the job brief must score ≥70 to prevent vague contracts.

2 Smart AI Matchmaking:

Two-way curation connecting talent to exact project needs.

3 Automatic Escrow Trigger:

Zero work begins without guaranteed payment.

4 Milestone system:

Project broken into milestones, 72-hour trigger escrow release to prevent client ghosting.

5 Income Intelligence Dashboard:

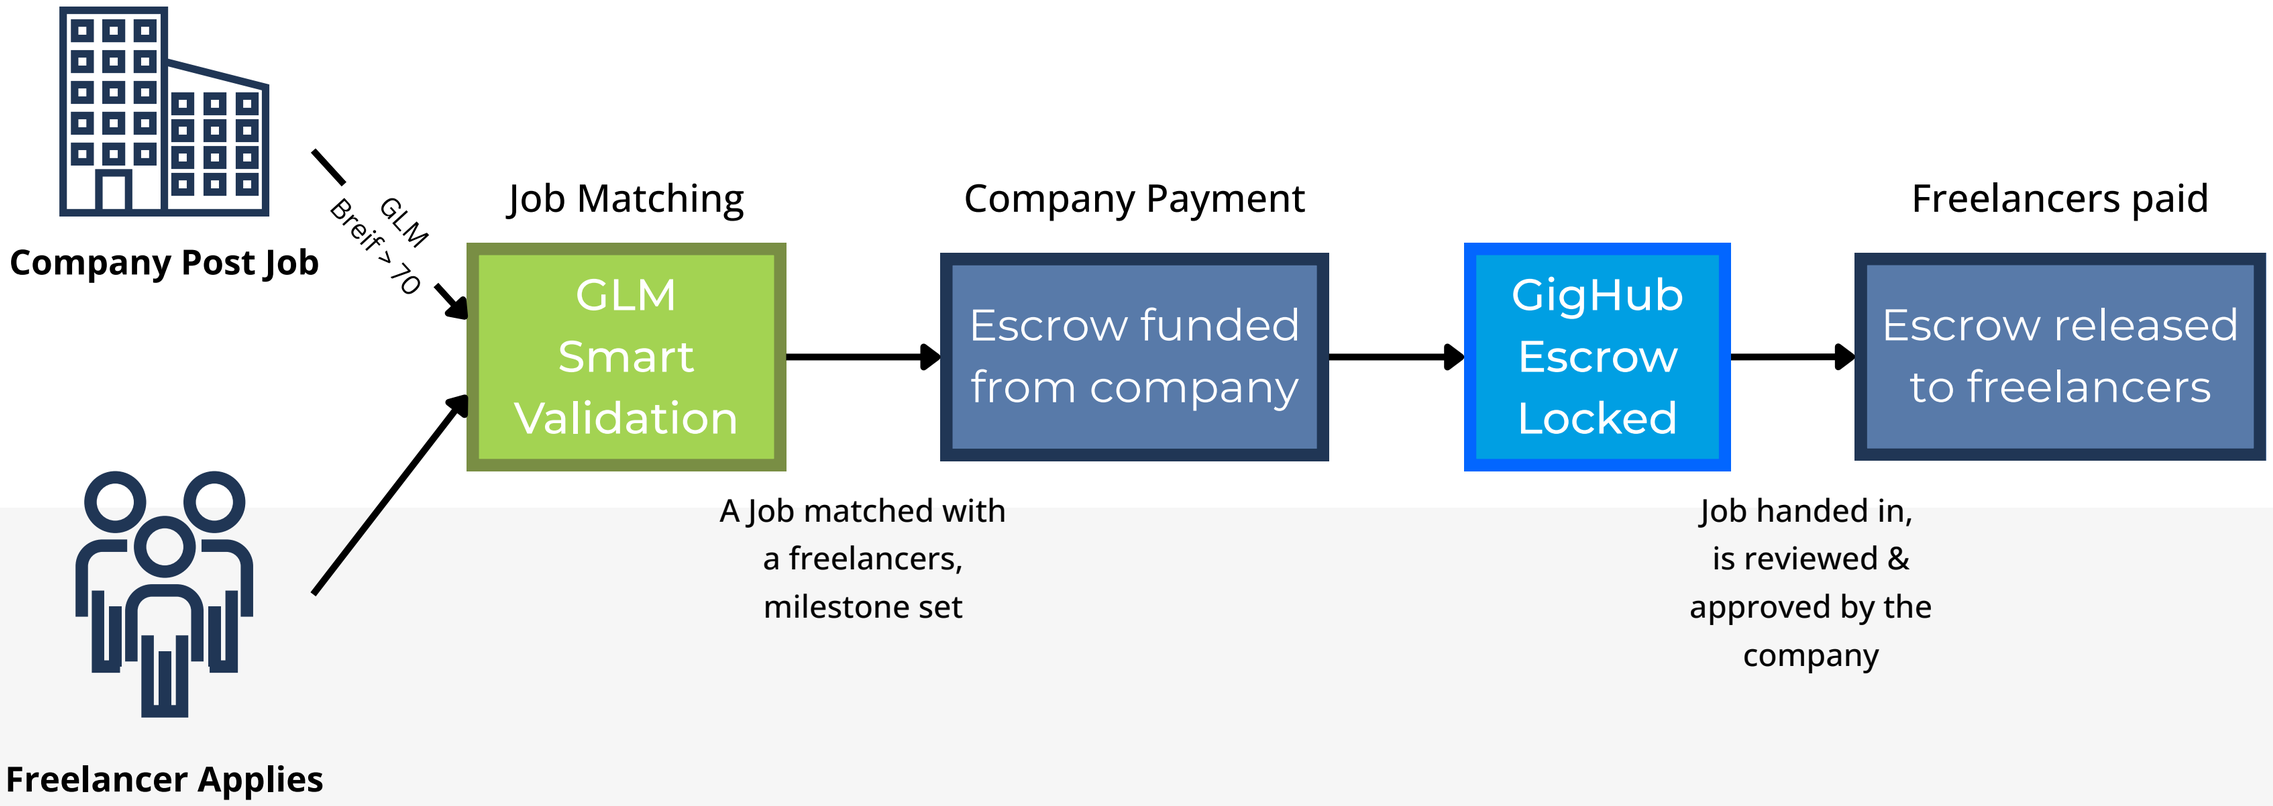
Converts project payouts into formal, bank-verifiable PDF statements

6 End-to-end encrypted delivery:

AES-256-GCM. 100% IP privacy, deleted after 72 hours.

USE CASE

GigHub



Encryption

SUBMISSION

Encrypt on Freelancer's Device

- Browser encrypts using AES-256-GCM
- Encryption happens before upload
- Only ciphertext leaves the device

Upload Encrypted Blob

- Cloudflare R2 receives only encrypted data
- GigHub cannot read it
- Maximum security, zero trust architecture

Proof-of-Delivery Hash

- SHA-256 hash stored in PostgreSQL
- Immutable record for audit trail
- Proves delivery without exposing content

Client Downloads & Decrypts

- Client downloads encrypted file
- Decryption happens on client's device only
- GigHub never participates in decryption

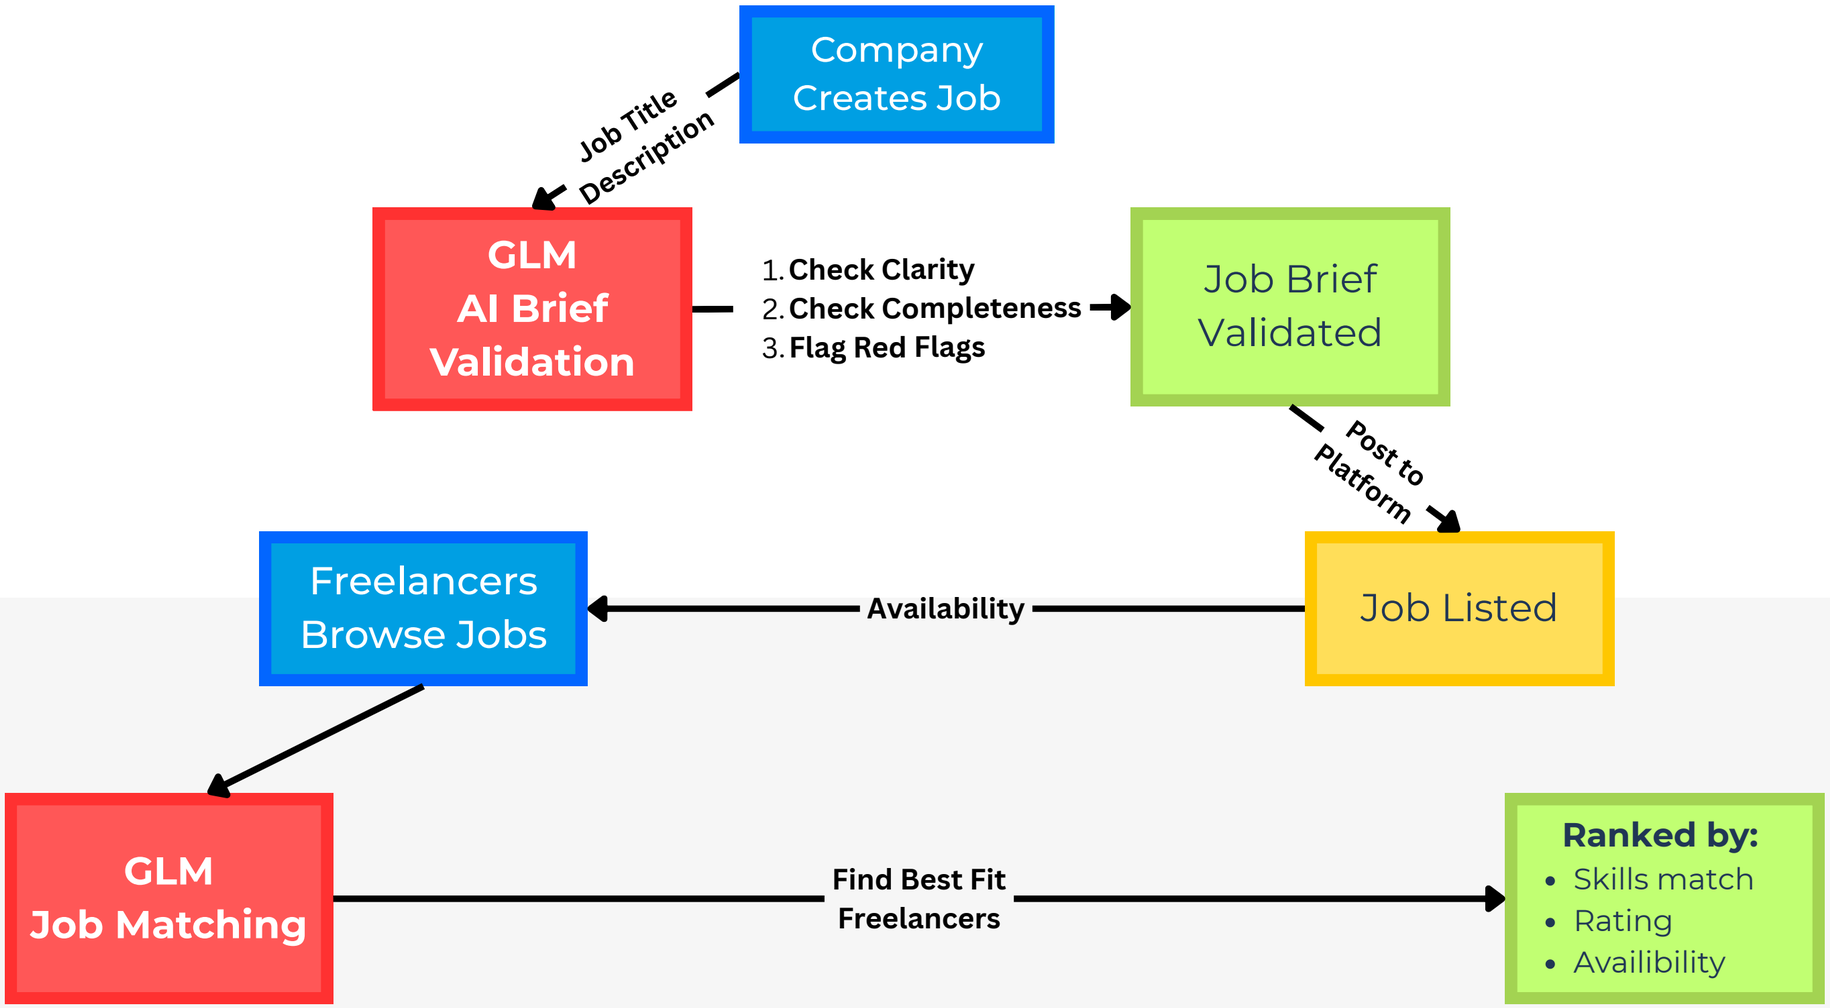
Auto-Delete After 72 Hours

- R2 lifecycle rule hard-deletes encrypted blob
- File is gone, cannot be recovered
- SHA-256 hash remains as permanent proof

AI USAGE

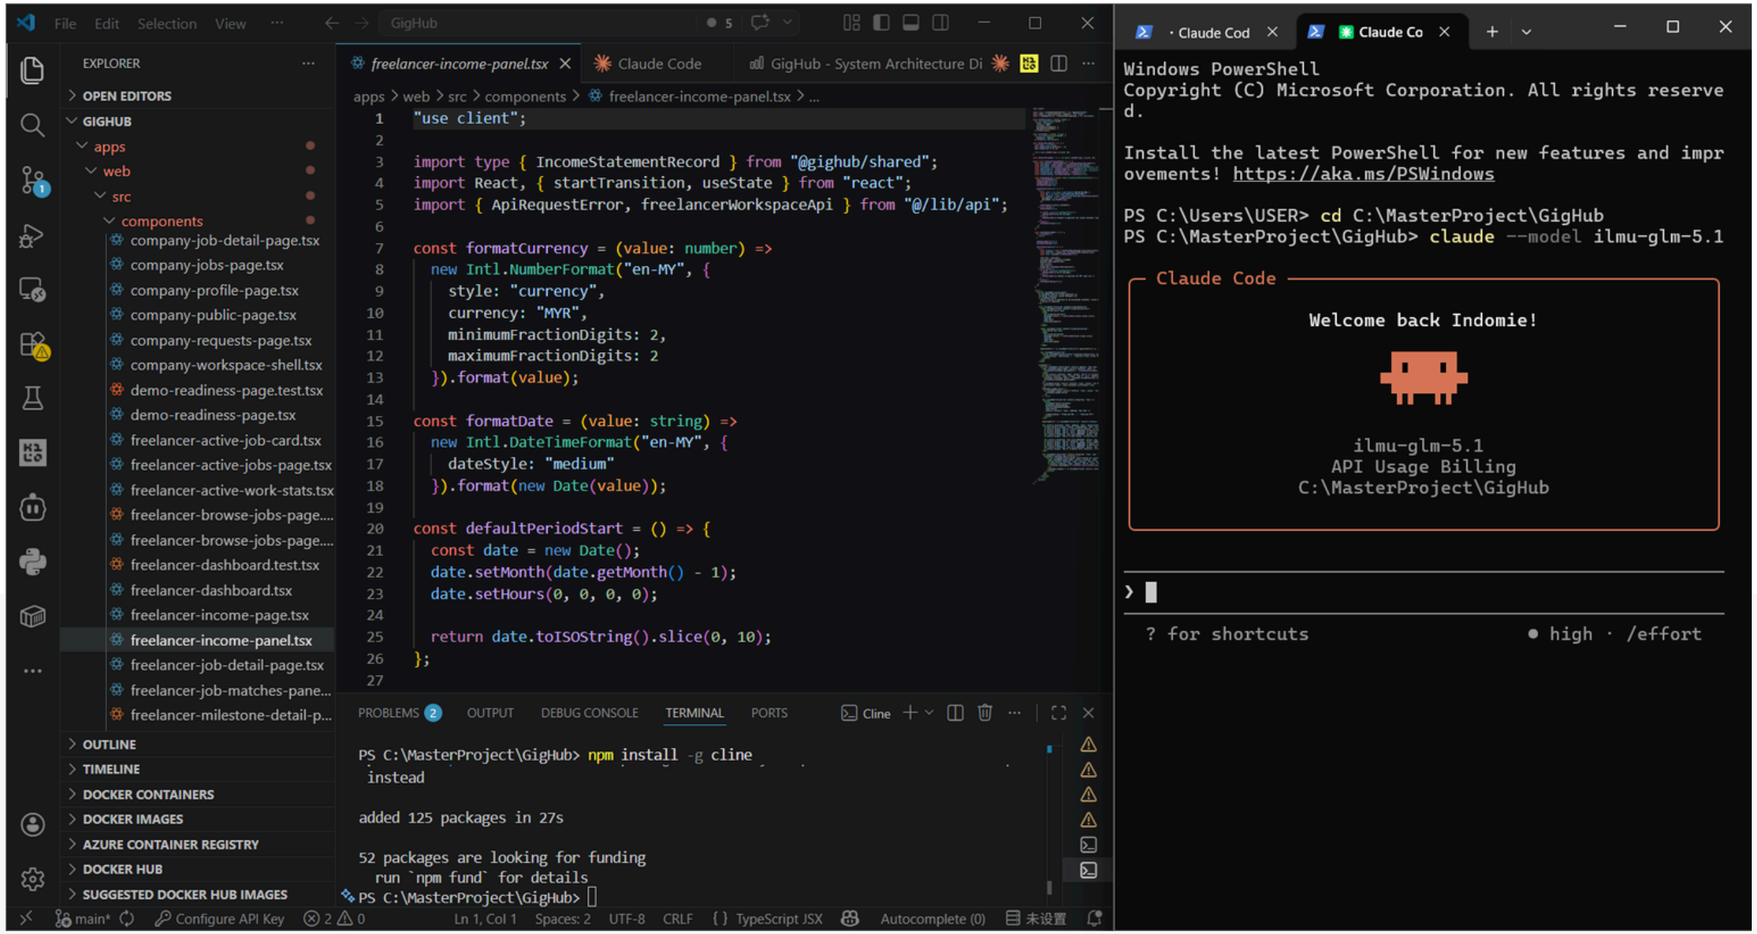
JOB MATCHING & BRIEF VALIDATION

GigHub



ILMU-GLM-5.1

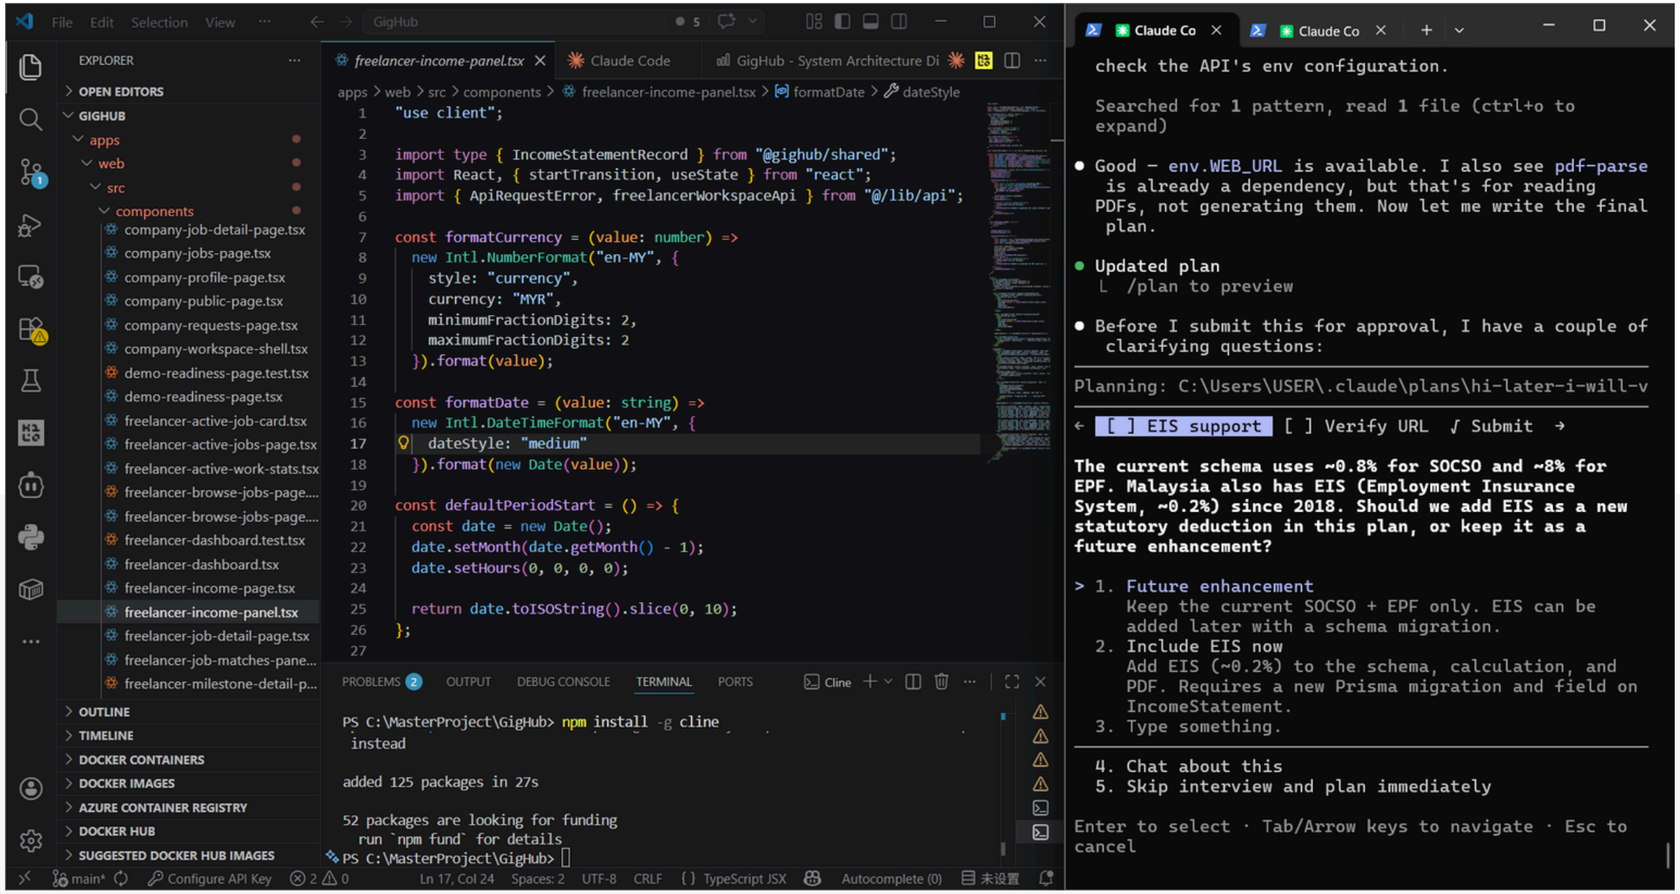
GigHub



ILMU-GLM-5.1

GigHub

The ilmu-glm-5.1 model studies the current income statement validity in Malaysia, then plans and executes the statement generator designs



PROTOTYPE

- GIGHUB

DEMO

ORIGINALITY & INNOVATION

WHAT WE DO DIFFERENTLY

GigHub

Usage of GLM-4

GLM-4 is the basic architecture of GigHub, serving as the infrastructure governing job matching, payment security and also job validation.

Difference from Our Competitor: GoGet

GigHub acts as a "digital HR department" for startups. It uses GLM-4 to ensure contracts are enforceable before they even begin, whereas GoGet focuses on "on-demand" manpower for tasks like dispatch or event crew.

Among the first to provide formal proof of income

Helps gig workers with clear income statement, transforming them from informal gig transactions to formal statement, preventing them from the "Unbankable" state, allowing them to borrow housing and automotive loans

Road Map

Foundation & Alpha Testing (0-3 Months)

- GLM Calibration: Conduct a batch run of test briefs to calibrate the >70 specificity score threshold for various industries (Design, IT, Copywriting).
- Escrow State-Machine Build: Develop the "accept-then-fund" sequence and integrate the 72-hour auto-release cron jobs.
- Implement and stress-test the AES-256-GCM client-side encryption and Cloudflare R2 auto-deletion logic.

Malaysian Financial Integration (3-9 Months)

Pilot the "Income Statement" with local financial institutions to ensure the PDF transcripts are accepted as formal credit history.

SME Scalability & Compliance (9-18 Months)

Formalise the dispute resolution mechanism to make it law compliant and also launch SME onboarding program

Market Expansion & Ecosystem Growth (18-36 Months)

Upscaling the system to provide more advanced AI matchmaking and expansion to market beyond Malaysia

THANK YOU

FOR YOUR NICE ATTENTION
